Richard,

"In addition to current monitoring requirements under CFAC's discharge permits, CFAC is also in the process of fully characterizing the site under the EPA and MT DEQ oversight, and the results of initial sampling events do not raise any immediate concerns."

We are not characterizing the site, but are monitoring their efforts.

Hope this helps.

I'm struggling with this-- perhaps more than I need to -- but I think the question is: are we concerned with the offsite migration of contaminants due to recent precipitation. I want to make sure that our response is not read as being "EPA has no concerns about contaminants at the site."

How's this?

"While EPA is in the process of fully characterizing the CFAC site, monitoring requirements are in place, and the results of initial sampling events do not raise any immediate concerns."

"CFAC already has existing monitoring requirements and there has been nothing new discovered during our 1st two sampling events that would raise any concerns."

I checked with CFAC people as well and the above response is sufficient. Feel free to edit this response as necessary.

CFAC already has existing monitoring requirements and there has been nothing new discovered during our 1st two sampling events that would raise any concerns. I will do a little more checking, just to make sure and get back with everyone.

Thanks

Can you help with a suggested few sentences in response to below? I am going to have to ping HQ OPA before responding but wanted to get this to you asap.

.....

Christopher Salas NBC Montana. Wants to know if there are any contamination concerns at CFAC plant due to recent rain and snow melt runoff and high river levels. 406 885 2055.
